

Figure 1 . Blue-grey heifer equipped with (a) BlueSky Telemetry GPS-collar and (b) Lotek Wireless GPS collar

Figure 2. Attaching the GPS collar to a blue-grey heifer

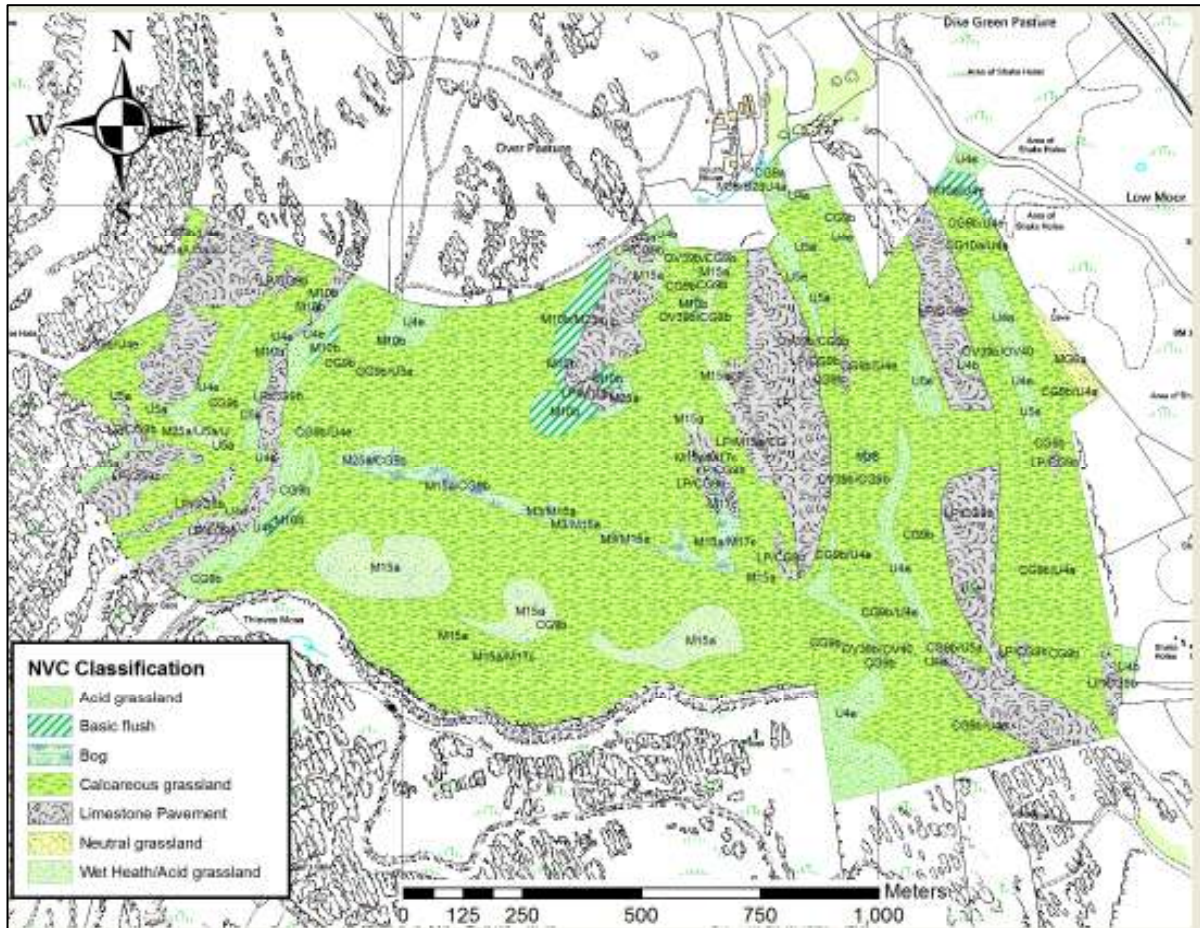

Figure 3. NVC Habitat map of the two fields. Each coloured area represents an area of a particular species composition as set out in the figure legend.

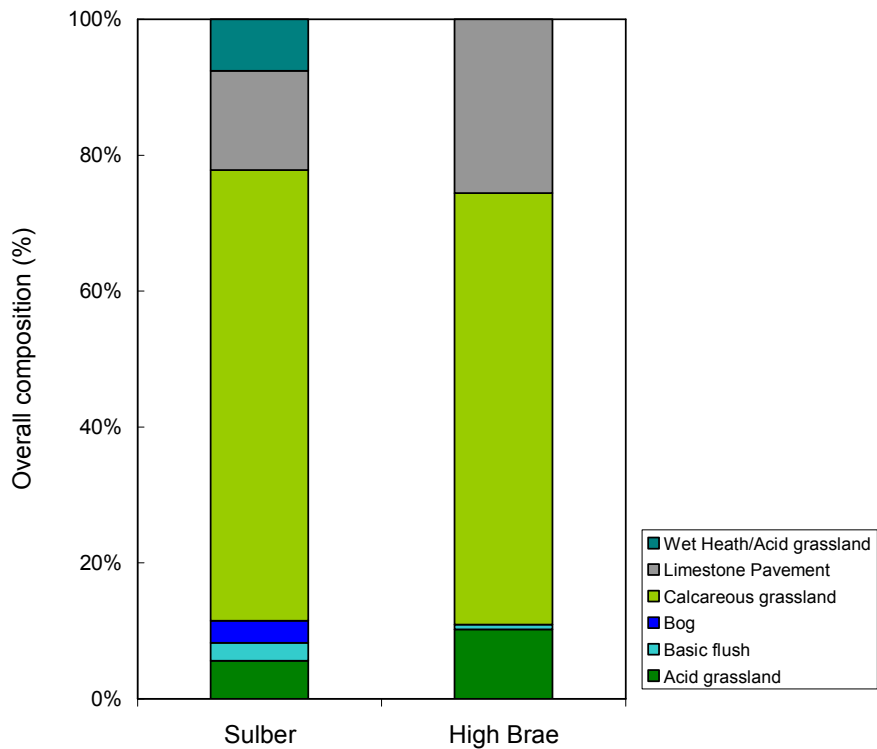

Figure 4. Percentage coverage of the various plant communities occurring within each field that were used to calculate the compositional analysis. See figure for key to different plant groups. Note that, as 'Neutral grassland' made up a very small percentage of available area and was unused by the cows, it was not included in any of the analyses.
