

Figure 11. Proportion of the locations recorded in the various habitat types for each month of the year. The first column (separated by the vertical dark line) shows the proportion of each habitat that is available to the cows.

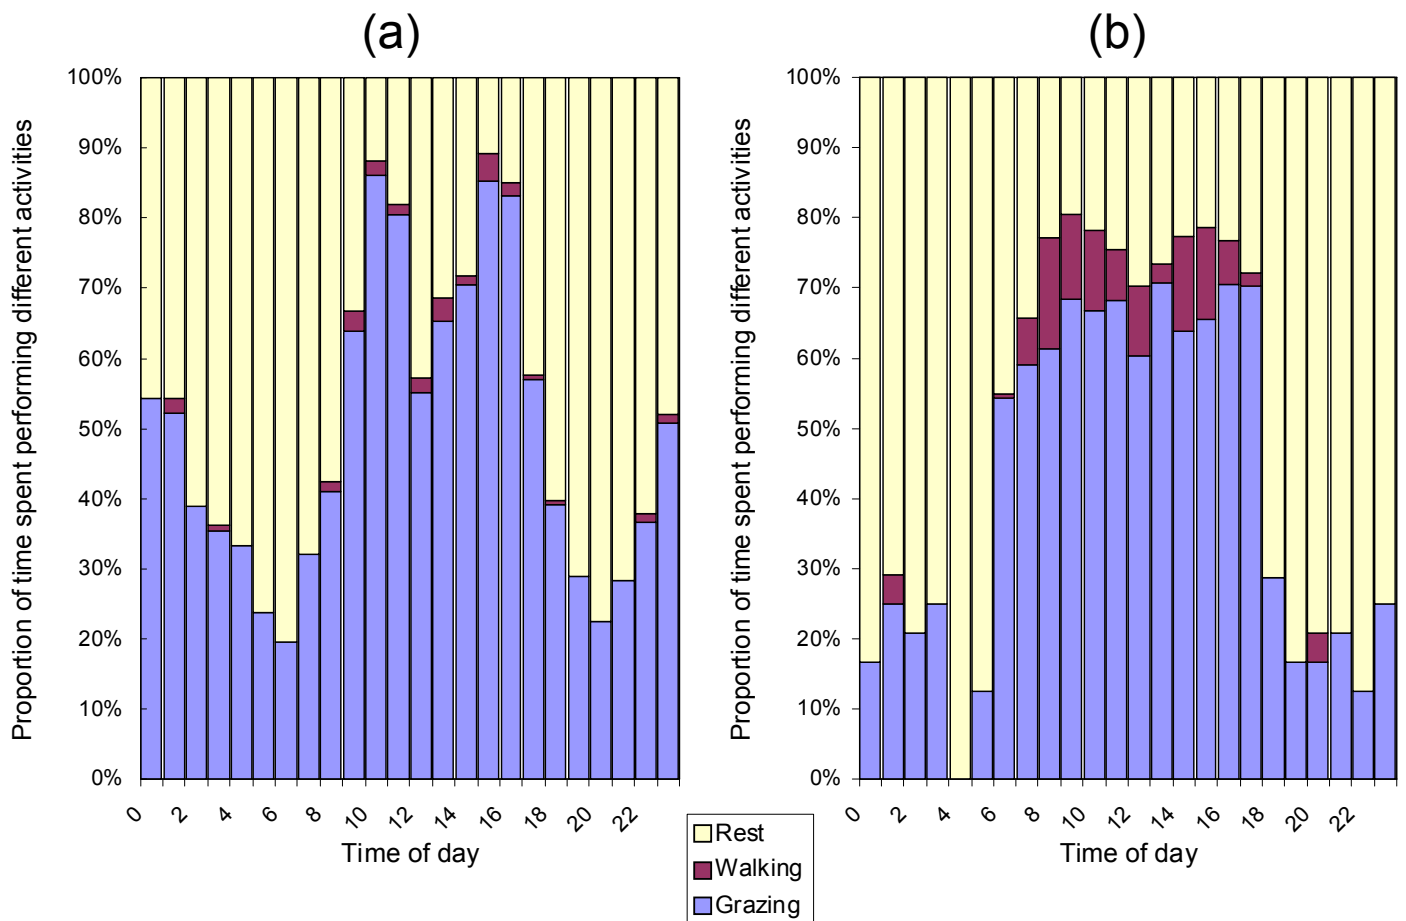

Figure 12. Proportion of time that the cows spent performing different activities for each hour of the day.

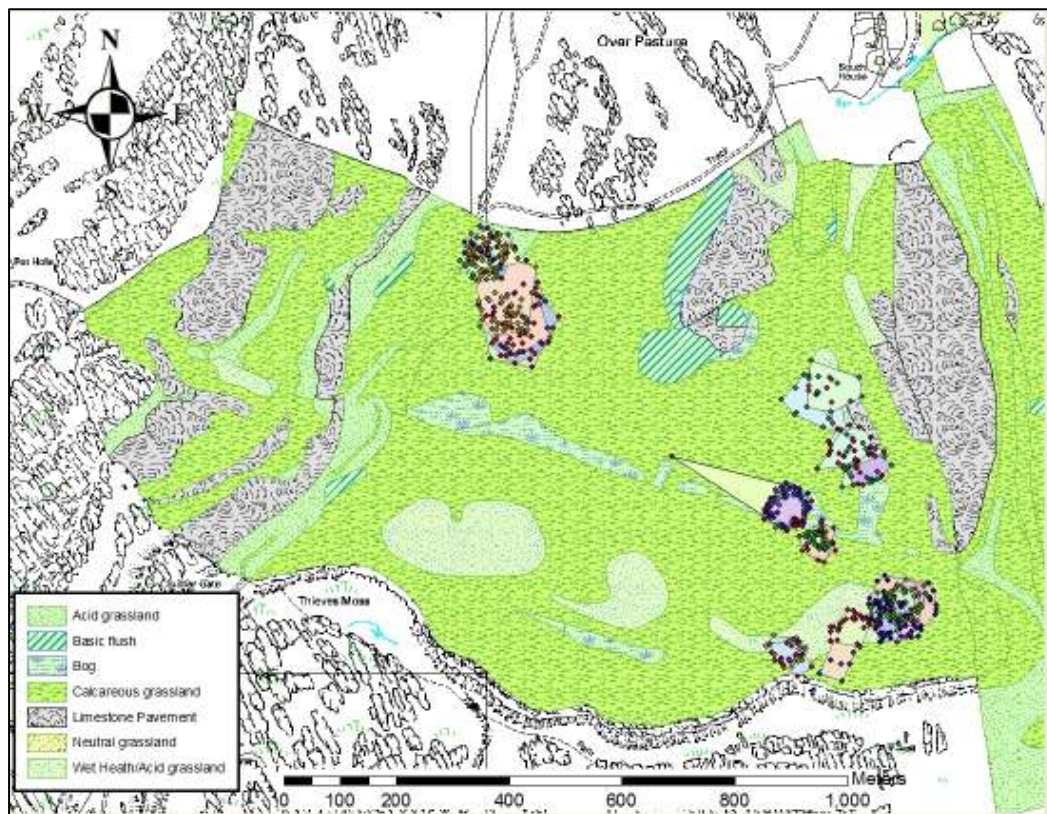

Figure 13. Map showing the locations of the cattle herd at various times during the day. Each dot represents the location of an individual cow, while the different colours represent the positions recorded at different times of the day. For each set of observations, an MCP has been produced to provide an indication of the overall area used by the herd. A total of 48 sets of observations were made over 4 separate days.
