

WET WOODS HABITAT ACTION PLAN

AIMS

- To ensure that there is no further loss in the area and biodiversity value of wet mixed woods in the Yorkshire Dales National Park.
- To enhance and restore, where necessary, the biodiversity value of wet woods.
- To increase the area of wet woods in the Yorkshire Dales National Park, ideally by natural regeneration or, by planting with trees of local provenance where natural regeneration is not possible or is inadequate.

OBJECTIVES

To achieve these aims we need to:

- determine the current biodiversity value of wet woods in the Yorkshire Dales National Park;
- protect existing areas of wet woods from damage, neglect or inappropriate management;
- promote the conservation management of existing wet woods including measures to encourage regeneration, a diverse age structure, retention of mature and veteran trees and both standing and lying deadwood, and;
- reduce fragmentation and increase the area of wet woods, ideally through natural regeneration or, where this is not possible or is inadequate, by planting with trees of local provenance. Much of this new woodland should extend and reconnect existing woodlands.

ACTIONS & TARGETS

In order to achieve these objectives the following actions should be carried out and the targets achieved within the time-scale given:

Actions	Target date	3 year cost £
Devise and implement a survey and monitoring programme to determine the current biodiversity value of wet woods in the Yorkshire Dales National Park.	2003	5000
Include objectives to support biodiversity conservation targets for wet woods in the Dales Woodland Strategy	2000	0
Ensure no new planning permissions (or extensions to existing ones) are granted which will result in the loss of wet woods.	ongoing	0
Encourage landowners and managers, through the use of advice and management grants, to conserve the biodiversity value of the remaining wet woods including stockproofing, rabbit control, planting of native species, retention of veteran trees, standing and lying deadwood.	2010	110,000
Increase the area of wet woods by 50 ha ideally through natural regeneration or where this is not possible or is inadequate, by planting native species of local provenance. Most of this planting should be adjacent to and or connecting existing wet woods.	2010	80,000

WHO WILL BE RESPONSIBLE FOR THE ACTION PLAN?
