Norber Erratics The Norber Erratics, over 100 in total, are perhaps the finest example of erratics in Britain and can be	**Geology walk** Huge sandstone rocks in the wrong place. They came from a kilometre north of here	Geography, geology, science,

found on the southern slopes of Ingleborough, close to the village of Austwick. Massive dark boulders of sandstone and slate, some of them precariously balanced on limestone plinths, are a spectacular sight.	and were moved by glaciers and left stranded when the ice melted over 12,000 years ago. Many appear to be balanced on smaller limestone	
Look at Ingleborough Hall and walk through the tunnel at the bottom of Thwaite Lane ///prospers.reassured.tiny Thwaite Lane Look out for 'Lynchetts' - the remains of an ancient field system created over a thousand years ago by Anglo Saxon farmers. They were earth terraces dug by hand on the side of a hill to maximise the use of land for agriculture.	**Heritage walk** The Farrer family built Ingleborough Hall as their Summer estate, with a sporting estate. The tunnel was built for the "village people" to walk through. An ancient route between Clapham and Austwick, once used by the monks who owned big sheep farming estates. These old roads were high above the wet valley floor.	Human Geography, History, Anthropology
